

Export your entire BOE metadata to a RDBMS

- Schedule within the CMC the extraction of the data of your SAP BOE platform to fill in a clear format database. Make them available through a universe.
- 360eyes comes with a pre built universe and a set of Webi reports allowing you to query your different environments.
- Use your existing BOE platform to share your metadata with more users.

Explore and analyze your SAP BOE metadata

- Document all the content of your platform: Documents (objects, conditions and variables used), universes, Auditor data and security.
- Compare different environments.
- Cross analysis between 360eyes data to:
 - **Perform impact analysis** (downstream and upstream effect of any universe or SQL change).
 - **Detect unused** documents and universes by mixing data from the CMS and Auditor.
 - **Track duplicated objects** (different version of the same report).

Keep control over your BO deployments

- 360eyes allows you to keep snapshots of your platform. Follow your BOE metadata change from time to time.
- Follow user activity including Deski one. Auditor data becomes clearly visible.

Query your SAP BOE metadata

Keep an eye on your Business Objects metadata

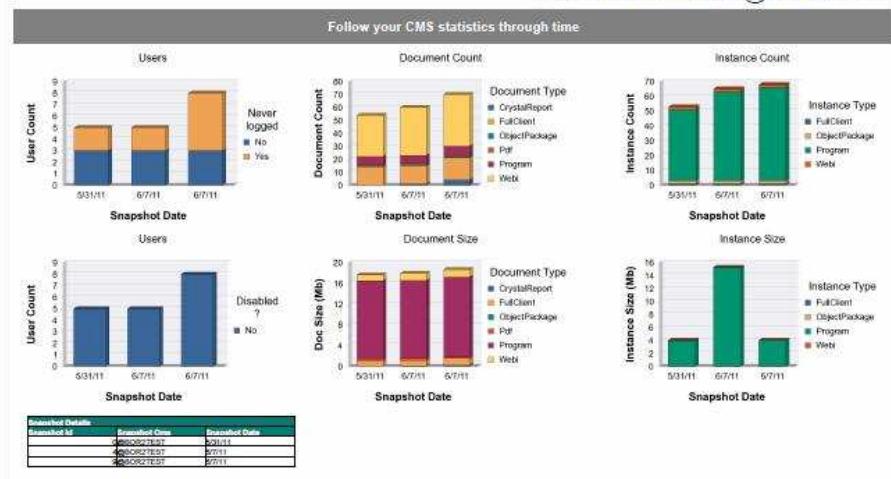

360eyes for Business Objects XIR2, XI3 and BI4: Universes allowing you to query without limits all your BO metadata.

Why choose 360eyes like almost 200 customers around the world?

Reporting on the BOE platform data is easier and available to much more users through Webi and Ad Hoc reporting.
