

360suite: Optimize Business Objects administration

Like almost 200 customers world wide you can use our suite to optimize SAP BO project costs:

360view™ Manage, audit and document BOXI security

360plus™ Securely backup your entire BOE platform
Selective restore of any content, including lost or corrupted content (like personal documents deleted by mistake)

360eyes™ Perform impact analysis (downstream effect of any universe object / SQL change)
Follow the evolution your SAP BOE metadata through time
Query and analyze your BO platform data using Webi

360cast™ Schedule dynamically BO reports

360suite Top 10 awesome features for SAPBO administration:

- 1) Manage security using web matrix
- 2) Document (Excel export) your CMS (security matrix, groups, users, universe overloads ...)
- 3) Schedule backup of your entire Business Objects platform
- 4) Selective restore of any version including deleted or corrupted content (like personal documents)
- 5) Perform impact analysis (universe object and SQL)
- 6) Run jobs (BIAR, import users, Excel exports ...) from an Enterprise scheduler (Control-M, Dollar Universe...)
- 7) Explore, query and analyze the SAP BO repository using a universe
- 8) Dynamically schedule BO reports. Run those schedule using Control M
- 9) Document any element of the deployment (objects, universes, conditions, auditor data ...). Cross check those data
- 10) Follow your BOE metadata evolution through time.
